

FireFly Virtualization Servers

Preconfigured for Success and TestNav Qualified® by Pearson

Today's schools need technology that goes beyond low cost and great performance, they also need technology that will give them rock-solid compatibility with standardized testing. FireFly Host Servers are now **TestNav Qualified® by Pearson**, making them the best solution for both state testing and for everything else. Our servers are fully preconfigured for easy setup and purpose-built for fast, consistent success. With FireFly Servers you get:

- Power exactly where it matters for top performance at the best possible price
- Exclusive FireFly Software and Utilities for fast setup and hassle-free operation
- Reliable benchmarks for consistent success in every workload environment

Low Workload:	120 users
Medium Workload:	105 users
High Workload:	85 users
Standard YouTube™:	120 users
Full-Screen YouTube™:	39 users

* Results will vary based on individual use and system settings and are intended only as a baseline indicator of observed results.

Reliable Benchmarking

The best relationships are built on trust. At FireFly we always give you honest benchmarks that accurately represent our own in-house testing. We set our user limits to be the points at which we first see drops in performance for a given workload. Actual user limits will vary based on a variety of system conditions, however you can be confident that in a comparable workload environment you can achieve similar results.

Description of Benchmarking Workloads

(All listed programs running simultaneously)

Pearson TestNav 8®
